

HALO 360 Light

Quick Start

Thank you for using Bushman Panoramic Products.

- 1) Open
- 2) Charge
- 3) Install
- 4) Turn ON
- 5) Dimming
- 6) Temperature
- 7) Turn OFF
- 8) Warning

1) Open

Open the HALO 360 Light, and you may take it out of its box. It is made of aluminum to allow maximum of heat dissipation. There is a red ring on the bottom that serves the purpose of grip and feet. Please note that the Halo 360 will get very hot when running ON in full power. This is normal with such powerful light.

2) Charging

When you receive the Halo 360 Light, it has been tested and it is not fully charged. Please do charge it when you receive it. With the USB-C port. The LED will indicate red. Charging will take over an hour.

3) Install

The Halo 360 Light has a male 1/4" thread on the top and a female 1/4" on the bottom. This is to easily set up on a 1/4" camera tripod or a Bushman Monopod. On the top of the Halo 360 Light is a red ring that allows a better grip for your camera or for stacking multiple Halo 360 Lights. You can easily screw on the Halo 360 Light on a 1/4" thread.

4) Turn ON

To turn ON your Halo 360 Light:

- press ONCE on the ON/OFF button.
- A little green LED light will turn ON.

5) Dimming

The Halo 360 Light has 6 dimmable positions.

- 0% / 20% / 40% / 60% / 80% / 100%

Turn charge the dimming on the light, press as follows the DIM button until you have the necessary brightness.

- When on position 0% the Halo 360 Light is still ON and still allows you to change the brightness.
